**We Just Made the Ogre More Versatile**

Melfred Borzall's Ogre stacked reamer is now available with built-in swivels.

Santa Maria, CA— Built with more cutters than any other reamer in its class, Melfred Borzall's Ogre is built for jobs that have a lot of cobbles, shale, river rock, glacial till and hardpan. The reamer is designed with a slow taper and deep, spiraled fluting to give it maximum mixing and pumping motion as well as efficiently carry away cuttings. Angled fluid jets propel water opposite the reamer rotation to keep carbides clear of debris. The Ogre stacked reamer is fabricated so each cutter takes off only ½ inch at a time for smooth, efficient cutting. It's built with varying sized carbide blocks to prevent shaft wearing directly in front of the reamer body, has hard-facing on all other wear areas, and features curved, hard-faced back-up blades for added wear resistance during pushbacks. The Ogre is now available with 3 carbide cutter styles to maximize reaming production in a wider variety of tough conditions as well as the option of a built-in swivel. Shark-tooth, conical aggressive, and conical dome cutter options make the Ogre one of the most versatile and aggressive reamers in cutting sizes from 8 to 48 inches.

For more information on the Ogre and all our products call 800-558-7500 or visit our website at [https://www.melfredborzall.com/product\\_cp/ogre-reamer/](https://www.melfredborzall.com/product_cp/ogre-reamer/).
